

# DAIKIN

## **Daikin. Reducing the heat on Lithium ion batteries.**

Daikin's family of high-performance electrolytes is now available—including flame-retarded formulations which improve the safety of next generation Lithium ion batteries. Patented, fluorinated additives used in these electrolytes also enhance battery cycle life plus high-temperature and high-voltage performance in automotive, specialty transportation, aviation, energy storage, industrial and personal communication applications. All Lithium ion battery cathode and anode technologies can benefit from these advanced formulations. Daikin electrolytes are produced in the U.S.A. Their performance has been verified by Lithium ion battery manufacturers and independent national laboratories. For details, contact the world leader in fluorochemistry.
